Plummer-vinson Triad Flashcard

Plummer-Vinson Syndrome is an association of postcricoid dysphagia, upper esophageal webs, and iron deficiency anemia

Patients who have Plummer–Vinson syndrome often have a burning sensation with the tongue and oral mucosa, and atrophy of lingual papillae produces a smooth, shiny, red, dorsum of the tongue.

The plummer-vinson triad involves;

- **Hypochromic mycrocytic anemia**
- **Atrophic glositis**
- **Esophaeal webs**
